### Några källor till övrig etymologi:

I den mån ej etymologin förklaras i samband med ett taxons namngivning - och så skedde sällan blott för mindre än en mannaålder sedan - så är man hänvisad till sekundära källor och av slika kan blott ett mycket litet - men naggande gott - urval här anges. Förstås finns åtskilliga namn, som har vare sig biografiskt, latinskt, grekiskt eller klassiskt mytologiskt ursprung. För namn av geografiskt ursprung kan t.ex. goda kartverk vara användbara. Somliga namn kan ha latiniserats från ett eller annat modernt språk. En del andra har t.ex. litterära ursprung - stundom från en eller annan sagosfär, bl.a. den

isländska eller kan vara hämtade ur t.ex. seriefigur-världen - och är sällan eller aldrig åtkomliga via aldrig så goda mytologiska uppslagsverk som t.ex. Leach & Fried (nedan) eller andra trevliga översikter såsom flera av Alf Henriksens verk. (Åtskilliga originalverk - Hesiodos' "Theogoni", Homeros' "Odysse", Arrianos' "Anabasis Alexandru", etc. - är ju dessutom i sig själva goda läsupplevelser). Av slika skäl gäller här Axel Wallengren's gamla sentens : "Mycken läsning gör dig klok, därför läs varenda bok". Det förtjänar kanske likaså att påpekas att Perseus-projektets goda nätverkslexika från engelska till grekiska och latin är åtkomliga från följande båda nätverksadresser: <http://www.perseus.tufts.edu/cgi-bin/engreek> respektive <http://www.perseus.tufts.edu/cgi-bin/engreek?lang=Latin>

### Källor till illustrationer:

Sammanställningen ovan är tyvärr ännu oillustrerad. Ett litet urval av litteratur innehållande illustrationer till många i texten omnämnda taxa presenteras därför nedan. För att detta ej skall

svälla över alla bredder refereras främst något-sånär modern bestämmingslitteratur av standardmodell och enstaka nyare taxonrevisioner. Listan är således långtifrån komplett. Hänvisningar till äldre verk går dock i regel att finna i den här refererade litteraturen.

Följande förkortningar brukas:

DF = Danmarks Fauna, Gads Forlag, København

MIOS = Marine Invertebrates of Scandinavia, Universitetsforlaget, Oslo

SBF = Synopses of the British Fauna (New Series), Linnean Society, London

TD = Die Tierwelt Deutschlands, Gustav Fischer, Jena

TNO = Tierwelt der Nord- und Ostsee, Leipzig.

Dessutom rekommenderas, ehuru ej nedan refererade, de faktablad som ICES (Internationella havsforskningsrådet) publicerar över pelagiska organismer i serien "Fiches d'Identification du Zooplankton" Conseil International pour l'exploration de la mer, Charlottenlund Slot, København. Dessa har publicerats fr.o.m. 1949. De senaste av sammanställaren kända bladen (Fiches 169-171) utkom 1983.
